

1. Provide the Name Reaction and the mechanism for the following transformation, including the formation of the active catalyst:

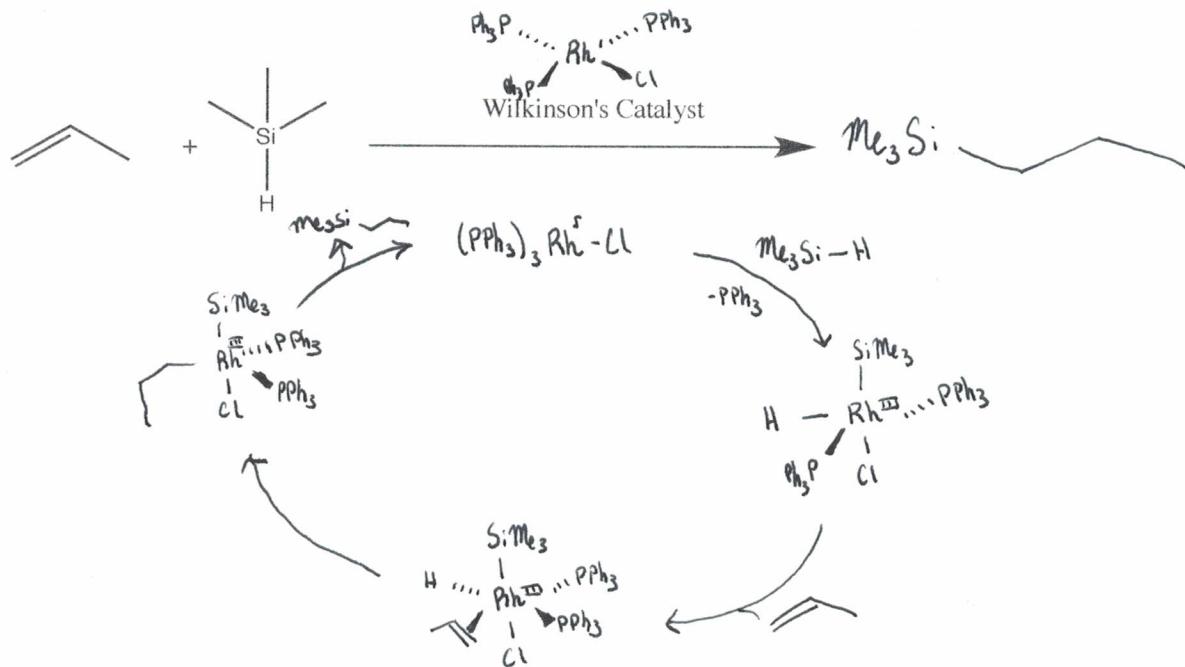

(Hint: The active catalyst is Pd^0)

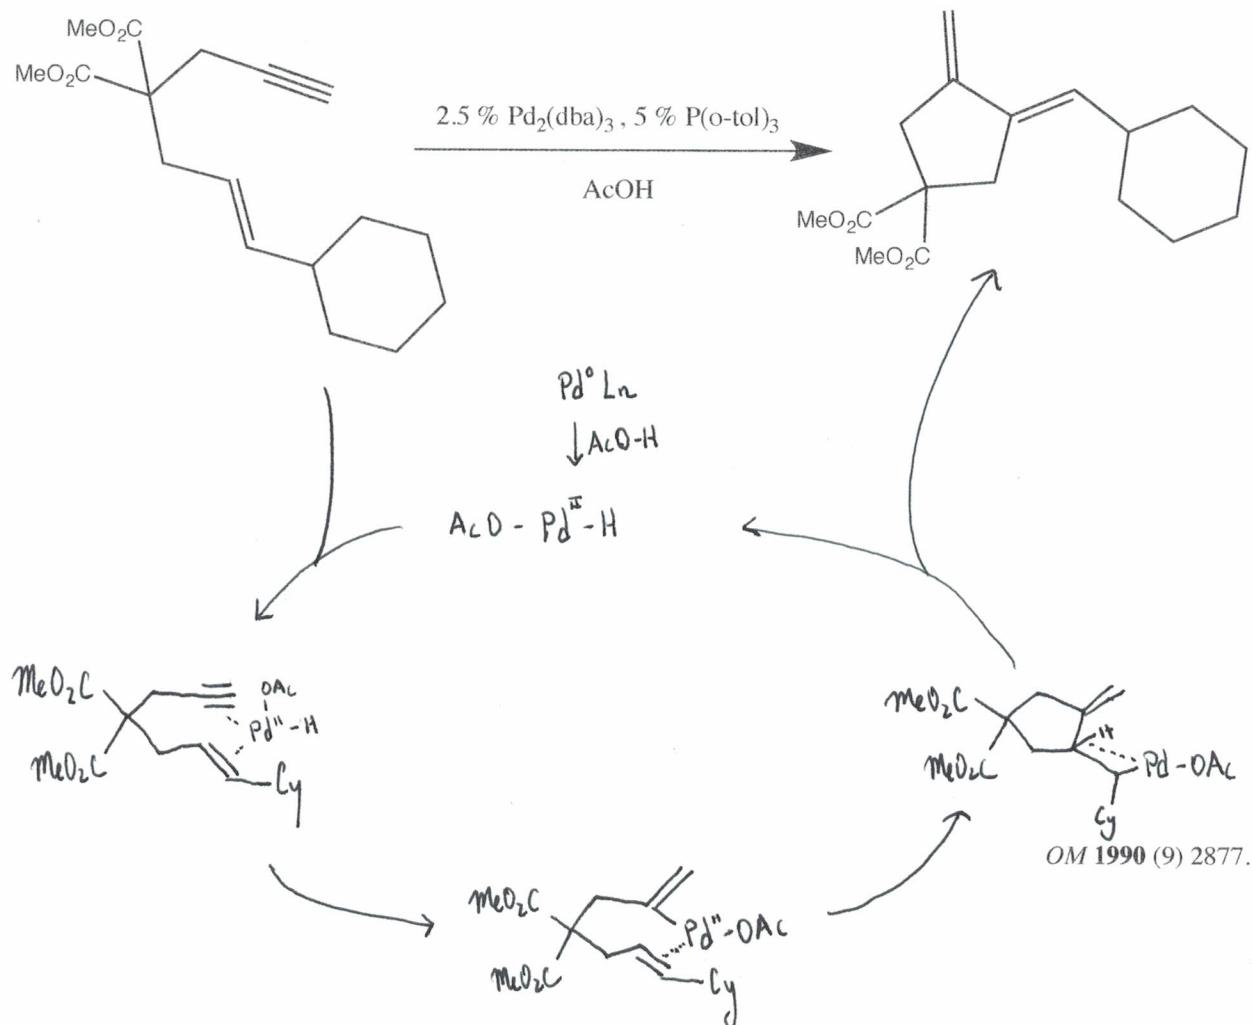

2. Provide the product for the following reaction along with a detailed mechanism.

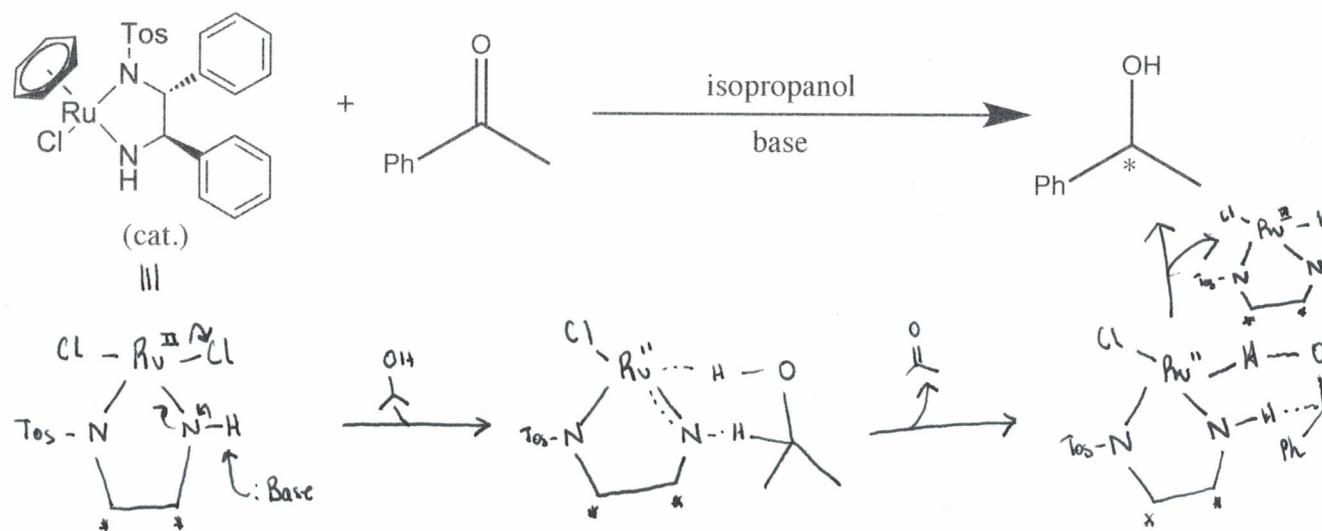

3. Provide the structure of the catalyst, the reaction mechanism, and the major product.

4. Provide a plausible mechanism for the following reaction (you may skip activation of the catalyst):

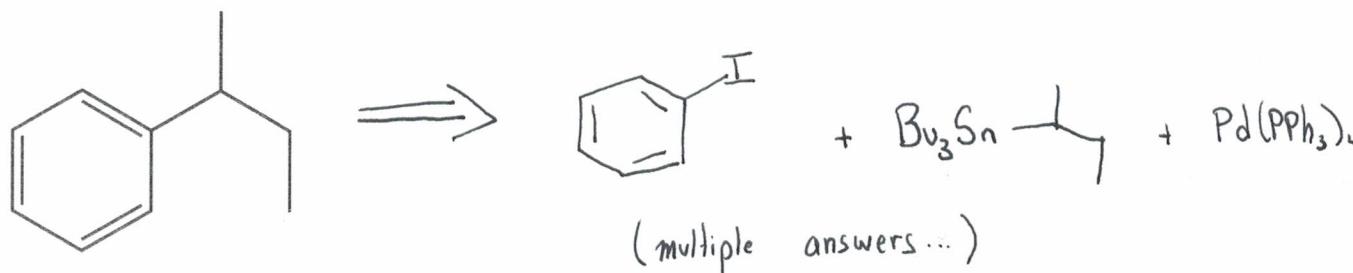

5. Provide the Name Reaction and a plausible reaction mechanism for the following reaction:

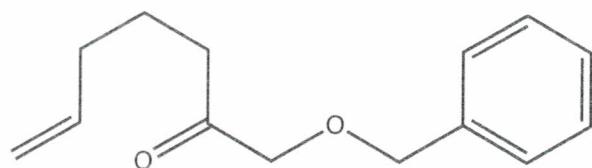

JOC 2001 (66) 7931.

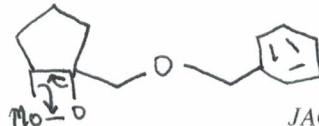

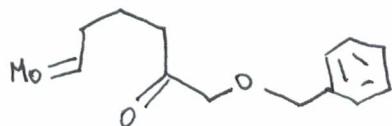

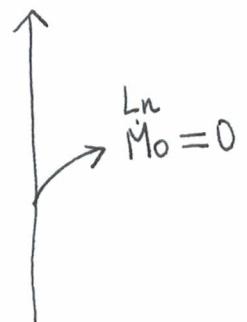

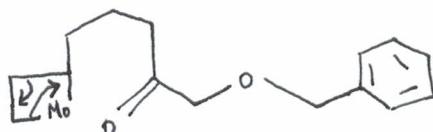

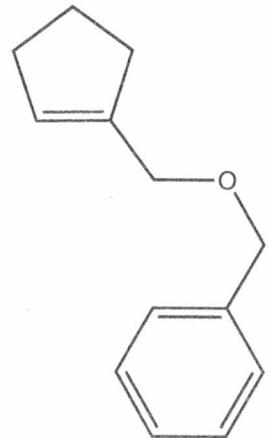

6. Provide a retrosynthesis for the compound below from commercially available starting materials (preferably using one organometallic process), and provide the mechanism for the key step.

7. Provide a plausible mechanism for the following reaction:

$L_n Mo =$ (1 eq.)
benzene

JACS 1990 (112) 3875.
